

Baffling Bodies

Below are listed 32 questions about our bodies. Over the next 4 weekends, you are to answer at least 10 of them (you can do more if you want!) and present your findings in a booklet of your own design, or as a presentation. Try to consider your work's appearance carefully and make it interesting to read. We would like to see the progress you have made on the topic each Monday to ensure you are on the right track. Please bring in notes, covers, pictures etc on the following Mondays - 9th Jan, 16th Jan, 23rd Jan and bring in your completed topic by Monday 30th January. This is to ensure that you pace your work sensibly and are able to complete the whole task to a high standard without last minute panics!
Have fun researching!

COMPLETED PROJECT DUE IN ----- MONDAY 30th January 2012

How does the nose smell?

Why is the human ear such a strange shape?

What are hiccups?

Why is blood red?

How do cuts heal?

What is colour blindness?

How do ears help us balance?

What are goose pimples?

What are freckles?

What makes hair curl?

How often do we dream?

What happens to our skin in the sun?

When do we grow the most?

What is dandruff?

Why does hair go grey?

Why does your tummy rumble?

Why do people have different colour skins?

Why do we need sleep?

Why do we blink?

Why do you sneeze?

What is the Adam's Apple for?

What happens when you cough?

Why do we yawn?

What causes burping?

What is cramp?

Why do I get dizzy if I spin around?

What causes an itch?

Why do we snore?

How can some people be "Double Jointed"?

Why are bruises strange colours?

What are wrinkles?

Why do we sweat?
