

As part of their topic, Y6 have been learning about physical and human geography through the study of two contrasting environmental regions: the Amazon Rainforest and Antarctica. They identified physical features including locating continents and cities as well as learning about climate zones, land use, natural resources and human settlement. A major part of this research was around environmental issues, such as the destruction of rainforests and protecting Antarctica.

As a homework project, the children researched and created two separate biomes with information about the animals that inhabit them.
